### PERSONAL STATEMENT

Experience in working on version control systems like Subversion and GIT and used Source code management client tools like Tortoise SVN, Stash, SourceTree, Git Bash, GitHub, Git GUI, and other command-line applications, etc. Good understanding of the principles and best practices of Software Configuration Management (SCM) in Agile, Scrum and Waterfall methodologies. Created SCM Process, policies, procedures, and Release Notes to follow Development and allow QA teams to Release or Deploy the highest quality product for the enterprise.

### WORK EXPERIENCE

#### Middleware/Devops Engineer

ABC Corporation - March 2015 - Present

##### Responsibilities:

- Supporting multiple teams for multiple applications including java/j2ee and .Net.
- Maintaining detailed documentation of moderately complex system specifications, including system installation procedures, system backup, recovery techniques, and system test methods.
- Developing and implementing an agile SDLC and refinement of the software configuration management (SCM) infrastructure.
- Deploying the Java applications into web application servers like Apache Tomcat.
- Performing all necessary day-to-day subversion functions for the project like merging, creating branches and tags using Tortoise SVN.
- Managing application software codebase including branching and versioning.
- Designing and implementing subversion metadata including elements, labels, attributes, triggers, and hyperlinks.

#### DevOps Engineer

ABC Corporation - December 2013 - March 2015

##### Responsibilities:

- Responsibilities supported multiple teams for multiple applications including java/j2ee and iOS.
- Provided detailed documentation of complex build and release process, mops, build cycles and calendars including creating build reports and release notes.
- Assisted PM and RM creating weekly status reports, roadmaps and other presentations.
- Implemented best practices of agile methodology to speed up the delivery process efficiently.
- Was an active member of daily stand up meetings, bug scrubbing meetings, and sprint planning meetings as best practices of agile environment.
- Worked closely with developers, QA teams, product owners and other stakeholders to deliver software through the build and deployment
