- I worked a variety of shifts, including night, weekend, and holiday work.

**FIELD ENGINEER** 12/2014 to 11/2017

**Abb Ltd | Augusta, GA**

- Directed and supervised the earthmoving crew for the open-cut mining project's facilities
- The distribution center's layout was reorganized to boost the effectiveness of outbound product shipping
- Created supporting materials for requests for proposals
- Responded to requests for clarification and reviewed design changes
- Provided a review of design changes and requests for clarity
- Made the appropriate contributions to meet requirements by computing emissions calculations and reviewing site air emission permits
- Effectively coordinated work that complied with design and construction documents with the site engineering team and field workers
- Verified that the construction went along as planned and in accordance with the terms of the contract
- Led the team in error-reduction troubleshooting efforts
- Controlled the budget, planning, quality control, adherence to safety regulations, and coordination of contractors and tradespeople
- Taking soil samples and building supplies out of the ground to measure physical properties
- Put plans in place to reduce the number of quality variations brought on by agitation in portable totes
- Controlled the storage, reclamation, and shipping facilities of the port's coal export terminal
- Managed a team of earthmovers for a project that involved open-cut mining
- Kept an eye on the testing, inspection, and construction processes
- To ensure constant progress, observe installation, inspection, and testing procedures during construction
- Oversaw the work of concrete and earthmoving contractors for ore processing and recovery facilities
- Processes were evaluated to ensure that construction followed the timeline and adhered to the terms of the contract
- Managed all quality assurance inspections for development and implementation projects
- Acted as the site engineering team's point of contact for fieldwork coordination using design and construction documents
- Recognized any significant changes to the project that would have an impact on the price, completion date, or client relationship
- SAP was tested and integrated in preparation for a significant network upgrade
- By doing an investigation and analysis, we were able to identify the underlying reasons for failures and offer corrective action
- Waterborne operations are automated, from the produce tank to the specialty filler
- Successfully handled the budget and contractor and trade cooperation
- Oversaw and maintained the activities of concrete and earthmoving contractors for facilities
- Appointed and managed subcontractors to boost output and stick to pressing deadlines
- Applied knowledge of thorough root-cause failure analysis
- Recognized the potential for significant difficulties and offered solutions
- Examined process flows, found areas for standardization and improvement, and made recommendations
- After the project was finished, promoted a favorable customer support training experience.
