Sap/Abap Skills:

Sap Abap Consulting & Sap Abap Contracting analysis/development, OO Abap, Sapscript, smart forms, smartforms, Transport system, LSMW Data Migration, batch input (BDC), user exits, ALE: IDocs (input & output), ALV grids, Screen painter, Menu painter, dictionary, Multi-threaded ABAP (Parallel Processing with Asynchronous RFC), file management, dialogue programming, IS Retail, Unicode, change documents, change pointers, handling PDF's, barcode printing, Zebra label printing, 2d barcodes, EDI, Abap query, Migration, infotypes, user support, BAPI's, BADI's, SNOTE, change documents & pointers, search help exits, deep transport analysis, variant handling, processing files in hex mode, upgrading, speeding up code, RFC's. Rev Trac, Remedy.
I started as a Sap Abap developer, then moved into Sap Abap Consulting and now do Sap Abap Contracting.

BP, 10/2010 – 12/2010.

At BP I worked on their separation project to separate off a section of the business, this involved testing all aspects of the system to find out what problems would occur when it was removed from the main sap system. I also did general fixing to ensure their system was working smoothly.

Ciber, 07/2010 – 10/2010.

At Ciber I worked on their interface system, I set up interfaces to other systems which meant extracting sap data, formatting it into the required layout and passing it to another system and also receiving data, processing it and entering it into their sap system.

Chep, 04/2010 – 07/2010 (Extended once).

At Chep I did work on their SRM (v4) SAP system, using the Rev-Trac Console to handle the transports. I worked with Object oriented code, Custom BADIs, Search helps, Vendor Lists (Bespoke Ranking), Shopping Carts, Purchase Orders, Error messaging, HTML Templates, SNOTE and much more all in their SRM system. I edited templates to ensure the web view looked just how the customer required. We used RevTrac and Remedy.

ITelligence, 9/2009 – 03/2010 (Total: 6 months, 3 call backs)

Abap Contractor. Here I did label & paper output and interfaces with sap, automation of stock movements, batches & expiry dates. I also developed label printing on the zebra printers
